

## Scenario:

You are a working parent with two children and find it difficult to find meals they would enjoy and meals that are cheap and easy to cook. You come across a Recipe Generator App that looks like it may be able to solve your problems.

**Task 1:** Use the Recipe Generator to find a dinner recipe with a cook time of 20 minutes with 5 ingredients of your choosing.

**Task 2:** Look at My Favorites and find “Buttery Garlic Chicken Lettuce Wraps” and comment: “Perfect dinner meal for two growing children”.

**Task 3:** Look at the My Pantry and add 3 ingredients of your choosing to it.

## Notes

Changes to make to the application:

1. In Recipe Generator, change the “Enter the amount of time...” to a range input so the user can manually input a time range for a recipe’s cook time.
2. In Recipe Generator, add a search bar for “enter ingredients” so users can find ingredients faster without having to scroll through every possible option.

What needs to be kept the same:

1. In My Pantry, keep the mechanism to add an ingredient to a user’s pantry and quick and easy with the options to add one’s own item or pick from a selection of common ingredients using a search bar.
2. In Recipe Generator, keep the category chooser (breakfast, lunch, etc.) because it makes it easier for users to find the type of meal they would prefer.
